

Features & Benefits

Feature	series						Benefit	Impact
	SteelTech	IsyTech	Pro Tech	TopTech	TopTech Plus	UltraTech		
Eco-friendly operation with enhanced efficiency				•	•		An optimized consumption significantly reduces operating costs – with savings of up to 16%. Undercounter machines save 2.9%, while passthrough models consume 15.9% less. (compared to the 3.0 series)	Reduces costs and conserves valuable resources. 
						•	The UltraTech impresses with a 15.5% reduction in undercounter machine consumption and 25% lower operating costs for passthrough dishwashers.	
Efficient and powerful washing process.	•	•	•	•	•		The optimized washing process ensures higher efficiency and reduces chemical usage – thanks to a reduced water consumption of approximately 1.5 liters per wash cycle (depending on the machine) instead of the previous 1.9 liters. This saves about 0.4 liters per cycle, conserving resources and reducing costs.	Saves water and chemicals while reducing costs. 
Optimized fine filtration system				•	•		The improved fine filtration system ensures an even more thorough cleaning result while simultaneously reducing water consumption. By optimizing the perforation of the tank filter (from 0.5 mm to 1.2 mm), the rinse water consumption is significantly reduced.	Saves water and enhances washing results. 
Optimized hood insulation						•	The fully insulated hood makes the machine even quieter and more energy-efficient than the previous TopTech series, ensuring a more comfortable working environment and lower operating costs.	Less noise, lower energy consumption, and reduced operating costs.  
Fully insulated machine						•	The fully insulated machine stands out with reduced noise levels and lower operating volume. At the same time, the optimized insulation contributes to energy savings.	
Innovative heat recovery from drainwater						•	With drain water heat recovery in undercounter and passthrough machines, the rinse water for the next wash cycle is preheated, reducing energy consumption. Additionally, the system is osmosis-compatible without requiring conversion costs and helps lower long-term service expenses.	Improved indoor climate, enhanced user comfort, faster installation, energy savings, cost reduction, and lower maintenance effort.  
heat recovery from steam condensation			•	•	•	•	Working conditions are noticeably improved, as no hot exhaust air is released directly into the room—ensuring a more comfortable indoor climate and greater convenience for the operating staff. Additionally, the optimized design reduces installation time by up to 50%, saving time and simplifying commissioning.	
High-gloss polished wash chamber				•	•	•	Enables quick and effortless cleaning as dirt and residues adhere less.	Time-saving cleaning, reduced effort, and improved hygiene. 
Progressive soft start			•	•	•	•	Allows gentle washing of delicate items, such as lightweight plastic or fine glassware, by gradually starting the washing process.	Increased safety for delicate wash items. 

Features & Benefits

Feature	series						Benefit	Impact
	SteelTech	IsyTech	Pro Tech	TopTech	TopTech Plus	UltraTech		
Ergonomic hood opening	•	•	•	•	•	•	Allows for more comfortable and effortless operation, reduces physical strain on staff, and ensures a more stable hood, especially in corner installations.	More comfortable operation, reduced physical strain, and increased stability. 
Automatic hood opening			•	•	•	•	Enables effortless and ergonomic hood operation via button press, reducing physical effort and increasing efficiency. The remote control provides greater flexibility.	Reduced physical strain and faster workflows. 
Maintenance-friendly drain pump	•	•	•	•	•	•	Allows users to easily inspect for blockages and simplifies replacement and maintenance with improved accessibility. The pump sump is directly accessible from the wash chamber, reducing service times and minimizing downtime.	Easy inspection, reduced maintenance time. 
Wash arms with integrated cleaning openings	•	•	•	•	•	•	Enable easy and thorough cleaning of the wash arms, preventing buildup and maintaining consistently high washing performance. Tool-free opening simplifies and speeds up maintenance	Time-saving and user-friendly operation. 
Glass washers with integrated reverse osmosis system				•	•		Ensures a sparkling wash result without requiring additional space. The integrated pre-filter cartridge and central control via the user interface simplify operation and reduce maintenance effort.	Time-saving, space-saving solution. 
Washing programs with disinfection A0 = 30			•				Meets the requirements of the medical standard UNI EN ISO 15883-1 and ensures reliable thermal disinfection.	Maximum hygiene safety, reliable germ reduction. 
Washing programs with disinfection A0 = 60				•	•			
Washing programs with disinfection A0 = 300						•		
Double rack system for undercounter machines				•	•	•	Allows simultaneous washing of two racks, increasing efficiency in cafés and bistros. The upper rack is flexibly removable, making the machine even more versatile.	Higher washing capacity, optimized workflows. 
Expanded program variety		•	•	•	•	•	Allows precise adjustment of washing parameters to suit different wash items – for example, with specialized programs such as an ice cream cup or bottle program – ensuring even more tailored cleaning results.	Optimal washing results, increased flexibility, higher efficiency.  
Intelligent operating concept		•	•	•	•	•	The glass display enables intuitive operation and indicates the operating status via color coding. It is scratch-resistant, hygienic, easy to maintain, and offers an elegant design with clear explanations.	Faster operation, fewer errors, optimized workflows. 
TFT touchscreen display					•	•	The TFT touchscreen control enables intuitive and fast operation. With a clear menu and easy-to-understand icons, programs can be selected effortlessly.
